

Certes Networks Environmental Compliance

WEEE Directive

Certes Networks is committed to environmentally responsible behavior. As part of this commitment, we have put in place a product end-of-life management solution that meets the European Union's Waste Electrical and Electronic Equipment (WEEE) Directive. All products shipped from Certes Networks' manufacturing facility have the appropriate WEEE markings and qualify for the recycling program. Certes Networks products that have reached the end of their useful life are to be recycled. Send all requests for recycling to green@certesnetworks.com. Certes Networks will arrange for pick up and transport to a recycling location that complies in an environmentally responsible manner with the EU WEEE Directive.

RoHS Directive

The Restriction of Hazardous Substances (RoHS) Directive restricts the use of certain materials that are commonly found in electronic products. Restricted substances are heavy metals, including lead, and poly-brominated materials.

Certes Networks has eliminated or substantially reduced its usage of the prohibited materials. However, the RoHS Directive allows a lead-in-solder exemption for Category 3 Telecommunications Products. It is Certes Networks' position that its network security products qualify for the lead-in-solder exemption.

Certes Networks is committed to completely eliminating its use of RoHS prohibited materials as that becomes technically feasible. We are constantly monitoring the availability of lead-free components and the progress of the lead-free manufacturing processes. We pledge to continually evolve and refine our products and processes as viable alternatives that do not impact product reliability or performance become available.

For more information on the status of our RoHS efforts or product-specific environmental questions, please e-mail us at green@certesnetworks.com.
